ORANGE COUNTY PUBLIC HEALTH LABORATORY SPECIMEN SUBMISSION INSTRUCTIONS

I. SPECIMEN COLLECTION

- A. Collect specimens in containers appropriate for the test requested. See Test Request Information.
- B. Use media or collection containers with current expiration dates.
- C. Store specimens under correct conditions before transport to the laboratory. See Test Request Information.

II. SPECIMEN IDENTIFICATION

- A. Label specimen container with patient's last name, first name, middle name or initial, and unique identifier. The patient's name and/or unique identifier on the specimen must be exactly as written on the test request form.
 - 1. Initials in place of the first or last name are unacceptable.
 - 2. The specimen cannot be processed without the patient name and/or unique identifier. See Specimen Quality Assurance Criteria.

III. LAB WEB PORTAL ORDERING

- A. Required Information – Specimens will not be processed without the following:
 - 1. Patient Information
 - a. Patient Name – Enter the patient's last name, first name and middle name or initial. The patient's name and/or unique identifier on the test request form must be exactly as written on the specimen.
 - i. Initials in place of first or last name are unacceptable.
 - b. Patient Address – Enter the patient's address
 - c. Date of Birth – Enter the patient's birthdate
 - d. Gender – Select the Gender from the options
 - 2. Submitter Information – Check that the facility name, address, and default provider of the submitting client are accurate.
 - 3. Specimen Source/Type – Select the appropriate specimen source from the drop list.
 - 4. Collection Information – Enter the date (MM/DD/YYYY) and time (HH:MM) the specimen was collected.

5. Reference Test – Test(s) must be requested by an authorized individual.
 - a. Only Pure Culture and Isolates are accepted for Reference Tests. Select Pure Culture/Isolate (Microorganisms) under Sample Type section.
 - b. For Reference Test (send an actively growing, pure culture for identification) – Also complete Cultured Referred As: (REQUIRED) section and include any relevant history or laboratory findings in the Other Test/Notes section located at the bottom of the laboratory slip.
 6. Clinical Test – A test or tests must be requested by authorized individual.
 - a. Select the appropriate test group (Mycology, Serology, Virology, etc.) See Test Request Information.
 - b. Submit one specimen for each test requested.
 - c. Exceptions - One specimen may be submitted for each of the following combinations:
 - i. Urine for urinalysis (UA) and Culture and Sensitivity (C&S) aerobic culture.
 - ii. Stool for enteric bacteriology (*Salmonella*, *Shigella*, *E. coli* and *Campylobacter*).
 - iii. Genital swab for C&S aerobic culture (includes Gonorrhea culture and aerobic bacterial culture and sensitivity).
 - iv. Blood for multiple serological tests (RPR, Hepatitis Markers, HIV, and miscellaneous serology).
- B. Other Information – Please fill out “Clinician Information” when applicable. This information will appear on the patient report.
1. Other Clinician Information – Enter the name, address, and phone number of the attending physician if different from the client (submitter). *This space may be used for additional clinic subdivisions or coded information (nurses codes, clinic code, etc.)*
 2. Client Accession Number – Enter the patient identification number/code. Please be accurate.

IV. TRANSPORT

- A. Ensure the test(s) requested are appropriate and correlate with specimen.
- B. All electronic orders are stored on the Public Health Laboratory Web Portal.
- C. Ensure the integrity of specimens before transport. Screw caps down tightly. Check for punctures or leakage.
- D. Print submitted Lab Web Portal Order Form in the outer pocket of the laboratory specimen bag.
- E. Place the labeled specimen in the zip lock section of the laboratory specimen bag. Zip the bag.
- F. Arrange for pick up or delivery. See Courier Schedule or Specimen Collection Stations.
- G. Changes to information on the test order request can be modified by the submitter within Lab Web Portal or in writing. FAX authorized written change requests to (714) 564-4068.

V. BIOTERRORISM RESPONSE

- A. Contact the laboratory at (714) 834-8385 if a bioterrorism agent is suspected.
- B. After hours including weekends and holidays, call (714) 628-7008 and ask to speak to Public Health Services On-Call Official.
- C. Isolates submitted for Select Agent testing must include the [supplemental form](#) and submitted on the [Lab Web Portal](#).
- D. Consultation and prior authorization from the Public Health Laboratory required before sending isolates for Select Agent rule-out or confirmation testing.

VI. SPECIMEN QUALITY ASSURANCE CRITERIA

To help assure quality testing and to meet federal and state regulations, the laboratory has strict requirements for specimen identification.

- A. The following specimens do not meet quality assurance standards and will not be tested.
 - 1. Specimens or request forms lacking patient name and/or unique identifier.
 - 2. Specimens with compromised quality (e.g., collected in improper or expired container, received leaking or broken, or past acceptable transport time).
 - 3. Test request without client (submitter) number or client name and address.

- B. The following specimens do not meet quality assurance standards. The client will receive a telephone call requesting correction.
 - 1. Test request without specimen source, date taken, or test requested will not be tested until the information is received.
 - 2. Missing information must be provided in writing by Fax (714) 564-4068 by 4:30 p.m. the next working day following notification.
- C. The following specimens do not meet quality assurance standards and will not be tested until corrected by a physician or nurse practitioner.
 - 1. Specimens whose patient name does not match name on test request exactly (i.e., identical spelling of all names). We can only accept the first applied label on the specimen.
 - 2. Client will be notified of mismatched identification by telephone.
 - 3. A physician or nurse practitioner must come to the laboratory and make corrections on the test request form and sign the corrections.
 - 4. Corrections must be made by 4:30 p.m. the next working day following notification.

VII. REFERRAL AND SEND-OUT SPECIMENS

- A. Referral testing and specimen send-out to reference laboratory are available. Contact OCPHL for additional information and consultation at (714) 834-8385.
- B. Some tests may require pre-approval and/or specific collection criteria. Refer to testing laboratory website for detailed instructions. See [the common referral tests table below](#).
 - 1. [Microbial Diseases Laboratory \(MDL\) Services and Test Catalog](#)
 - 2. Viral and Rickettsial Disease Laboratory (VRDL) Services and Test Catalog
 - a. [VRDL Specimen Submittal Forms](#)
 - b. [VRDL Test Catalog](#)
 - 3. [CDC's Infectious Diseases Laboratories Test Directory](#)
- C. Contact OC Communicable Disease Control Division at (714) 834-8180 for tests that require pre-approval.

Common Referral Tests

Common referral tests	Reference laboratory	Additional information
Chagas disease serology (<i>Trypanosoma cruzi</i>)	CDC	Supplemental information required
Chikungunya virus neutralizing antibody/PCR/serology	VRDL	
Dengue virus neutralizing antibody/PCR/serology	VRDL	
Dimorphic Fungi (Coccidioides, Histoplasma, Blastomyces) and Nocardia/Actinomycetes	MDL	
Enterovirus PCR/genotyping	VRDL	
Hepatitis A virus genotyping	VRDL	
Lymphogranuloma venereum (LGV) PCR	SFDPH	NAAT CT result must be positive
Mumps virus genotyping	VRDL	
Mycobacterium TB Complex – Molecular Detection of Drug Resistance (MDDR)	CDC	
Non-Variola Orthopoxvirus PCR	VRDL	
Rickettsia rickettsii RMSF serology	VRDL	
Rickettsia spp (Pan-Rickettsia) PCR	VRDL	
Rickettsia typhi serology	VRDL	
St. Louis encephalitis virus neutralizing antibody/PCR/serology	VRDL	
West Nile virus neutralizing antibody/PCR/serology	VRDL	
Yellow fever virus PCR	VRDL	
Zika virus neutralizing antibody/PCR/serology	VRDL	

PUBLIC HEALTH LABORATORY WEB PORTAL

Effective January 1, 2026, the Orange County Public Health Laboratory (OCPHL) will not accept paper requisition forms for laboratory test orders. The OCPHL Lab Web Portal is a secure, HIPAA-compliant system that allows users to submit test orders, monitor order status, view, print, or download reports in real time.

To ensure uninterrupted testing and reporting services, all client facilities must complete the following three actions:

1. Confirm your facility is registered with the OCPHL Lab Web Portal (*if not already registered*)
2. All staff that will be using Lab Web Portal will need to create individual user accounts
3. Complete the Client Information Form (*required for every facility*)

Facility Registration (Only complete if not already registered)

Each facility must register an account in the OCPHL Lab Web Portal before staff can create individual accounts.

To confirm registration or to register your facility:

1. Visit <https://prod.labwebportal.com/oc/#/auth/login>
2. Check the organization list for your facility name
3. If your facility is not listed, please contact us to have your facility account created

Individual User Registration

Once your facility is registered, all staff members who submit, track, or access laboratory orders must register individually for their own user accounts.

To register:

1. Go to <https://prod.labwebportal.com/oc/#/auth/login>
2. Select your facility name from the organization list
3. Create your individual user account

Complete the Client Information Form (One form per facility is required)

All client facilities — regardless of registration status in OC Lab Web Portal— must complete the Client Information Form to ensure OCPHL has accurate and current contact and reporting details.

Go to https://ochca.sjc1.qualtrics.com/jfe/form/SV_eMcZPYs0srkH8R8 to complete your Client Information Form.

LABORATORY SUPPLIES

ITEM	USE	MAXIMUM QUANTITY	ORDER INFORMATION
Anaerobic Transport Tube	Bacterial Culture		Call the OCPH-Lab Central Processing @ (714) 834-8401
Bacterial Culturettes (Modified Amies Clear Media)	Bacterial and Mycology Transport Media		
Para-Pak C&S Bottle (Culture and Sensitivity)	Enteric Pathogens i.e. <i>Salmonella</i> and <i>Shigella</i>	25 Vials	
Aptima Unisex Swab Specimen Collection Kit (Purple Box)	CT/GC NAAT / Trichomonas NAAT (Genital/Rectal/Throat)		
Aptima Urine Specimen Collection Kit (Yellow Box)	CT/GC NAAT / Trichomonas NAAT (Nucleic Acid Amplification Testing)		
Aptima Multitest Swab Specimen Collection Kit (Orange Box)	CT/GC NAAT / Trichomonas NAAT (Vaginal/Throat/Rectal)		
Fresh Stool Collection Container	Tests requiring a fresh stool sample		
Modified Thayer Martin Agar (MTM) Plate	Gonorrhea Cultures		
O&P Collection Kit – 2 Vials (10% Formalin and PVA)	Identification of Ova and Parasites in Stool Samples	25 Kits	
Pinworm Paddle	Isolation and Identification of Pinworms		
QuantiFERON - TB Gold Plus	TB test		
BD E-Swab Transport System	Aerobic, Anaerobic, Fastidious Bacteria, and <i>Candida auris</i> screens.		
OC Specimen Bags	Bag to Transport specimen and Lab Slip together in separate compartments		
Sterile 15 ml Conical Tube	Specimen Container		
Sterile 50 ml Conical Tube	Specimen Container		
Typhoid Urine Kits	Typhoid Clearance Cases	25 Kits	
Viral Transport Media / Universal Transport Media (VTM/UTM)	Viral testing i.e. COVID, Herpes, Measles, Mumps, Influenza, VZV		
GasPak EZ CO2 Pouch	CO2 Generating System		
Zebra Printer Specimen Labels	Cerner Label		
Hemocult Slide	Occult Blood Testing (Stool)		Call Purchasing @ (714) 834-2188
Blood Serum Separator Tube (SST) Tiger Top, Plastic Only	Serology Testing		
Blood Collection Tube w/EDTA (Lavender Top and Pearl Top)	Viral Load Testing		
Urine C&S Transport Kits Tube (Rubber Grey-Top)	Urine Cultures and Sensitivities (BD 364951)		
Urinalysis Tube (Rubber Yellow/Red Top)	Urinalysis (BD 364992)		
Water Collection Bottles (Idexx-120 ml Bottle with Sodium Thiosulfate)	Water Sampling		Call the Water Quality Lab @ (949) 219-0423

PUBLIC HEALTH LABORATORY SPECIMEN COLLECTION STATIONS

CITY	SITE ADDRESS	HOURS OPEN	COLLECTION LOCATION	COLLECTION TIME & DAYS
ANAHEIM	AHMC Anaheim Regional Medical CTR 1111 W La Palma Avenue (714) 774-1450	24 hours	<ul style="list-style-type: none"> ▶ Locate the Main Entrance ▶ Enter the Main Lobby ▶ Ask for the Main Laboratory ▶ Follow signs to the laboratory ▶ Drop-off specimen in the lab office ▶ Indicate you have a specimen for Orange County Public Health Laboratory If door locked, go to ED to drop-off specimen (be sure to state specimen for OCPHL) ▶ DO NOT REGISTER 	Monday-Friday 11:00 AM
LAGUNA HILLS	Saddleback Memorial MC 24451 Health Center Drive (949) 837-4500	24 hours	<ul style="list-style-type: none"> ▶ Locate the Main Entrance ▶ Head straight past the gift shop to the elevators ▶ Take the elevator to the basement (ground floor). Make 2 immediate lefts. ▶ Follow signs to the laboratory. ▶ Drop-off specimen to the laboratory receptionist or ring bell. ▶ Indicate you have a specimen for Orange County Public Health Laboratory ▶ DO NOT REGISTER 	Monday-Friday 11:00 AM
NEWPORT BEACH	Hoag Hospital 1 Hoag Drive (949) 764-4624	24 hours	<ul style="list-style-type: none"> ▶ Locate the Main Entrance ▶ Enter the Main Lobby ▶ Take the EAST elevator (to your left) ▶ Laboratory is at the basement, (B) Floor ▶ Drop-off specimen in the laboratory ▶ Indicate you have a specimen for Orange County Public Health Laboratory ▶ DO NOT REGISTER 	Monday-Friday 11:00 AM
FULLERTON	ST Jude Medical Center 101 E Valencia Mesa Drive Fullerton, CA 92835 (714) 446-7920	7 AM to 6 PM	<ul style="list-style-type: none"> ▶ Drive to the main entrance of the hospital to valet parking/or go to self-parking area ▶ Locate the hospital entrance ▶ Let the concierge/security know that you have a specimen for the laboratory ▶ Enter the laboratory ▶ Indicate you have a specimen for Orange County Public Health Laboratory ▶ DO NOT REGISTER 	Monday-Friday 11:00 AM
SANTA ANA	Public Health Clinics 1725 W 17th Street (714) 834-8385	24 hours	<ul style="list-style-type: none"> ▶ Located the front entrance of the building, facing 17th Street. ▶ Place specimen inside the white mailbox "Orange County Health Care Agency Laboratory Specimens Only". 	Monday-Friday 4:30 PM
IRVINE	Public Health Laboratory 8300 Marine Way, Suite 300 Irvine, CA 92618 (714) 834-8385	Monday-Friday 8:00 AM - 5:00 PM	<ul style="list-style-type: none"> ▶ Drive to the delivery side of building. ▶ Deliver inside the receiving counter. 	Monday-Friday <i>Last Pickup 4:30 PM</i>

LABORATORY TEST REQUEST INFORMATION

TEST NAME	DEPT	TESTS	DESCRIPTION	SPECIMEN REQUIREMENTS	TAT	REFERENCE RANGE	TEST METHOD	CPT CODES
<i>Aeromonas</i> Culture	BACT	B1	Screening procedure for isolation and identification of <i>Aeromonas</i> species utilizing conventional biochemical and matrix-assisted laser desorption ionization time of resolution (MALDI-TOF) techniques.	<p><u>SPECIMEN</u>: Stool <u>CONTAINER</u>: Stool transport bottles (Para Pak C&S), GN broth, or Rectal Swabs Note: The use of rectal swabs (Bacterial Culturettes) should be limited to patients with active disease, infants and children from whom feces may be difficult to obtain. <u>COLLECTION</u>: The specimen of choice is the diarrheal stool collected during the acute stage of the disease. Keep the stool specimen cool, do not incubate or refrigerate. Portions containing blood or mucus usually contain the highest number of pathogens. <u>TRANSPORT CONDITIONS</u>: Room Temperature (25±5°C): 4 days (Preserved stool) Refrigerated (5±3°C): Not recommended Frozen (-15±5°C): Unacceptable CIDT Screens: 7 days</p>	1 week	Negative	Culture	87077

LABORATORY TEST REQUEST INFORMATION

TEST NAME	DEPT	TESTS	DESCRIPTION	SPECIMEN REQUIREMENTS	TAT	REFERENCE RANGE	TEST METHOD	CPT CODES
Bacterial Culture, Aerobic	BACT	B2	Identification of all aerobic organisms found using conventional biochemical and matrix-assisted laser desorption ionization time of resolution (MALDI-TOF) techniques.	<p><u>SPECIMEN</u>: Urine, sputum, eye, ear, genital, wounds, tissue, body fluid, and abscesses.</p> <p><u>CONTAINER</u>: Bacterial Culturettes;BD Urine C&S Preservative (Gray top); sputum collection bottles; unpreserved urine, body fluid and tissue in sterile container</p> <p><u>COLLECTION</u>: Bacterial Culturettes are used for genital, eye, ear, wounds and abscesses.</p> <p><u>TRANSPORT CONDITIONS</u>: Room Temperature (25±5°C): as soon as possible (body fluids and tissue); 2 hours (sputum); 1 day (genital swabs); 2 days (swabs); Refrigerated (5±3°C): 1 day (sputum and tissue), 24 hours (unpreserved urine), 3 days (preserved urine) Frozen (-15±5°C): Unacceptable</p>	3 days	Negative	Culture	87040 87070
Bacterial Culture for Identification (<i>Salmonella/Shigella</i>)	BACT	B20	<i>Salmonella/Shigella</i> culture identification and confirmation utilizing conventional biochemical, serological, matrix-assisted laser desorption ionization time of resolution (MALDI-TOF), and whole genome sequencing techniques.	<p><u>SPECIMEN</u>: Pure culture isolates</p> <p><u>CONTAINER</u>: Slanted tubed media preferred, motility deeps acceptable.</p> <p><u>COLLECTION</u>: Do not refrigerate or freeze</p> <p><u>TRANSPORT CONDITIONS</u>: Room Temperature (25±5°C): Acceptable Refrigerated (5±3°C): Acceptable Frozen (-15±5°C): Unacceptable</p>	3 days	NA	Culture	87070 87077 87145

LABORATORY TEST REQUEST INFORMATION

TEST NAME	DEPT	TESTS	DESCRIPTION	SPECIMEN REQUIREMENTS	TAT	REFERENCE RANGE	TEST METHOD	CPT CODES
Bacterial Culture, Anaerobic (Call laboratory before submitting specimens for consultation)	BACT	B3	Identification of all anaerobic organisms found utilizing conventional biochemical and matrix-assisted laser desorption ionization time of resolution (MALDI-TOF) techniques.	<u>SPECIMEN</u> : Deep wounds, abscesses, body fluids, tissue <u>CONTAINER</u> : Swab in anaerobic transport tube. <u>COLLECTION</u> : Swabs- Collect under anaerobic conditions using an anaerobe swab. Call the lab for anaerobic transport tubes. <u>TRANSPORT CONDITIONS</u> : Room Temperature (25±5°C): 1 day Refrigerated (5±3°C): Unacceptable Frozen (-15±5°C): Unacceptable	2 weeks	Negative	Culture	87040 87075 87076
Bacterial Reference Culture for Identification, Aerobic	BACT	B4	Aerobic bacterial culture identification utilizing conventional aerobic biochemical testing, matrix-assisted laser desorption ionization time of resolution (MALDI-TOF), or whole genome sequencing techniques.	<u>SPECIMEN</u> : Pure culture isolate <u>CONTAINER</u> : Slant tube media preferred, sealed plates acceptable. <u>COLLECTION</u> : Do not refrigerate or freeze <u>TRANSPORT CONDITIONS</u> : Room Temperature (25±5°C): 2 days Refrigerated (5±3°C): Not recommended Frozen (-15±5°C): Unacceptable	1 week	By report	Culture	87070 87077
Bacterial Reference Culture for Identification, Anaerobic	BACT	B5	Anaerobic bacterial culture identification utilizing conventional anaerobic biochemical testing techniques and matrix-assisted laser desorption ionization time of resolution (MALDI-TOF) techniques.	<u>SPECIMEN</u> : Pure culture isolate on swab or plated media <u>CONTAINER</u> : Swab in anaerobic transport tube. Isolates submitted on plated media in anaerobic transport bag. <u>COLLECTION</u> : Do not refrigerate or freeze <u>TRANSPORT CONDITIONS</u> : Room Temperature (25±5°C) = 2 days Refrigerated (5±3°C) = Unacceptable Frozen (-15±5°C) = Unacceptable	1 week	By report	Culture	87040 87075 87076

LABORATORY TEST REQUEST INFORMATION

TEST NAME	DEPT	TESTS	DESCRIPTION	SPECIMEN REQUIREMENTS	TAT	REFERENCE RANGE	TEST METHOD	CPT CODES
<i>Campylobacter</i> Culture	BACT	B7	Screening procedure for isolation and identification of <i>Campylobacter sp.</i> utilizing conventional biochemical and matrix-assisted laser desorption ionization time of resolution (MALDI-TOF) techniques.	<p>SPECIMEN: Stool CONTAINER: Stool transport bottles (Para Pak C&S), GN Broth or Rectal Swab Note: Buffered Glycerol Saline is unacceptable as a transport medium. The use of rectal swabs (Bacterial Culturettes) should be limited to patients with active disease, infants and children from whom feces may be difficult to obtain. COLLECTION: The specimen of choice is the diarrheal stool collected during the acute stage of the disease. Keep the stool specimen cool, do not incubate or refrigerate. Portions containing blood or mucus usually contain the highest number of pathogens. TRANSPORT CONDITIONS: Room Temperature (25±5°C): 4 days (Preserved stool) Refrigerated (5±3°C): Not recommended Frozen (-15±5°C): Unacceptable CIDT Screens: 7 days</p>	5 days	Negative	Culture	87046
<i>Candida auris</i> Screen	MYCOL	M3	Screening procedure for <i>Candida auris</i> based on PCR.	<p>SPECIMEN: Axilla/groin swabs. CONTAINER: BD ESwab collection and transport system with modified liquid Amies. See Mycology Specimen Collection guide for details. TRANSPORT CONDITIONS: Transported to the lab within 48hrs of collection refrigerated (2-8°C).</p>	24-120 hours (PCR) 9-13 days (culture)	Negative	PCR	87481 87106
<i>Candida auris</i> Reportable Disease Only	MYCOL	M4	Culture identified as <i>Candida auris</i> required by State to be sent to the Public Health Laboratory.	<p>SPECIMEN: Pure culture on mycology slant or flask media, i.e., SAB or IMA. Specify isolate identification. CONTAINER: Submit or mail in a double container according to the IATA Infectious Substances Shipping Guidelines. TRANSPORT CONDITIONS: Room temperature (15-30°C) within 7 calendar days of identification.</p>	4 days (Final)	By report	By report	87106

LABORATORY TEST REQUEST INFORMATION

TEST NAME	DEPT	TESTS	DESCRIPTION	SPECIMEN REQUIREMENTS	TAT	REFERENCE RANGE	TEST METHOD	CPT CODES
Chlamydia/ Gonorrhea NAAT	VIRO	V1	Automated Qualitative Nucleic Acid Amplification, for the primary diagnosis of Chlamydia and/or Gonorrhea infections	<u>SPECIMEN:</u> Genital swab, vaginal swab, first catch urine, throat swab or rectal swab <u>CONTAINER:</u> Aptima swab specimen transport tube or urine transport tube. <u>COLLECTION:</u> See virology specimen collection guide for details. <u>TRANSPORT CONDITIONS:</u> Transport to laboratory at 2-30°C, within 30 days (urines), 60 days (swabs)	72 hours	Negative	Genprobe, Aptima COMBO 2	87491 87591
<i>Clostridium botulinum</i> Culture & Toxin Testing (Call Laboratory before submitting specimens)	BACT	B8	<i>Clostridium botulinum</i> culture and toxin testing for suspected foodborne and wound cases.	<u>SPECIMEN:</u> Pre-antitoxin serum, stool, gastric, tissue. Standard volumes: >8 ml of serum (not hemolyzed), 25 grams of unpreserved feces or 25-50 ml of gastric aspirate within 72 hours of onset. Tissue in sterile container inside an anaerobic pouch. <u>CONTAINER:</u> Sterile screw cap container <u>COLLECTION:</u> Contact Orange County Communicable Disease Control Division (CDCD) at (714) 834-8180 for testing approval prior to submission for specimen collection and shipping requirements. After hours, on weekends and holidays you may speak to a Public Health Official by calling Orange County Communications Center at (714) 628-7008. <u>TRANSPORT CONDITIONS:</u> Room Temperature (25±5°C): Unacceptable Refrigerated (5±3°C): 1 day Frozen (-15±5°C): Unacceptable	4 weeks	Negative	Send Out	99001
<i>Cryptosporidium</i> / <i>Giardia</i> Screen	PARA	P2	Direct Fluorescent Antibody test and/or modified acid-fast stain. <i>Cryptosporidium</i> is a significant pathogen in HIV+ patients. This is a combination assay for both <i>Cryptosporidium</i> and <i>Giardia</i> .	<u>SPECIMEN:</u> Preserved stool. 3 collected every other day is strongly recommended. <u>CONTAINER:</u> 2 vial stool kit with 10% formalin and PVA. <u>COLLECTION:</u> Add stool to each vial up to the "fill" line immediately after passage. Mix thoroughly. See Parasitology specimen collection guide for O&P exam for details. <u>TRANSPORT CONDITIONS:</u> Room temperature (15-30°C)	5 days (final)	Negative	DFA, Merifluor	87300 87015

Mycobacteriology Specimen Collection Guide

TEST	SPECIMEN	COLLECTION INSTRUCTIONS	TRANSPORT
<i>Mycobacterium</i> Culture and Sensitivity	Body fluids	<u>Abdominal (peritoneal, paracentesis, dialysis, bile):</u> Collect 10-15 ml aseptically into sterile tube. <u>Pericardial, Synovial:</u> Collect 3-5 ml aseptically into sterile tube. <u>Exudates:</u> Collect 3-5 ml aseptically into sterile tube.	Refrigerated (2-8°C) within 24hrs of collection.
	Bone marrow	Collect into SPS blood collection tube.	Room temperature (15-30°C) within 24hrs of collection. Hold at 35°C ± 2°C if > 24hrs.
	CSF	Collect 3-5 ml into sterile screw-cap tube.	Room temperature (15-30°C) within 24hrs of collection.
	Gastric lavage fluid	Collect 5-10 ml gastric specimen in sterile container. Have patient fast 8-12 hr; collect specimen in the morning before eating. Specify time of collection on container.	Refrigerated (2-8°C). Transport within 4 hours. If specimen transport is delayed (>4 hours from collection) add 100 mg sodium carbonate.
	Respiratory specimens (processed)	Send at least 1.0 ml of specimen processed with NALC/NaOH procedure (see CDC guidelines for procedure).	Refrigerated (2-8°C) within 7 days of collection.
	Respiratory specimens (unprocessed)	Collect 5-7 ml of respiratory secretion in sterile container without fixatives or preservatives. <u>Aerosol (induced sputum):</u> inhalation of warm hypertonic saline induces coughing and production of thin, watery specimen. <u>Preferred specimen.</u> <u>Sputum:</u> collect material brought up after a deep, productive cough. <u>Bronchial washings:</u> using a bronchoscope inject saline in segmental (for bronchial wash) or subsegmental (for bronchoalveolar lavage) bronchus. Suction saline out into a sterile container. <u>Transtracheal aspirate:</u> collect aspirate in sterile container.	Refrigerated (2-8°C) within 24hrs of collection. Specimen holding time is 96hrs.
	Stool (for detection of <i>M. avium</i> complex in HIV patients)	Collect into a sterile wax free container without fixative or preservative.	Refrigerated (2-8°C) within 24hrs of collection.
	Tissue biopsy (lymph nodes, deep wedge biopsies, external sources)	Collect tissue into sterile container without fixatives or preservatives. If the tissue is small or not immediately sent to the lab, add sterile saline.	Refrigerated (2-8°C) within 24hrs of collection.
	Urine	Wash the external genitalia then immediately collect 30-50 ml of a single early morning midstream urine sample into a sterile container.	Refrigerated (2-8°C) within 24hrs of collection.

Mycobacteriology Specimen Collection Guide

TEST	SPECIMEN	COLLECTION INSTRUCTIONS	TRANSPORT
<i>Mycobacterium tuberculosis</i> complex NAAT	Gastric Lavage fluid	Collect 5-10 ml gastric specimen in sterile container. Have patient fast 8-12 hr; collect specimen in the morning before eating. Specify time of collection on container.	Refrigerated (2-8°C) Transport within 4 hours. If specimen transport delayed >4 hours from collection, add 100 mg sodium carbonate.
	Respiratory specimens (processed)*	Send at least 0.7 ml of specimen processed with NALC/NaOH procedure (see CDC guidelines for procedure). For unprocessed specimens, prior approval is required.	Refrigerated (2-8°C) if transported within 7 days of collection. If longer, transport frozen on dry ice (-20°C or colder).
<p><u>*Additional testing is dependent on amount of specimen available.</u> <u>Additional specimen may be necessary to perform all tests.</u></p>			

Mycology Primary Specimen Collection Guide

TEST	SPECIMEN	COLLECTION INSTRUCTIONS	TRANSPORT
Mycology Primary Specimen Identification	Abscess	Clean abscess surface with sterile saline or 70% alcohol. Collect fluid/abscess material into clean tube and swab in Modified Amies Clear media (available at lab). Fluid or abscess material is preferred over swab.	Room temperature (15-30°C) within 72 hrs
	CSF	Collect 3-5 ml into sterile screw-cap tube. Transport to laboratory within 24 hours.	Room temperature (15-30°C) within 24hrs
	Ear	Collect swab of infected area and transport in Modified Amies Clear media (available at lab).	Room temperature (15-30°C) within 72 hrs
	Hair	Collect 5-10 hairs (and base of shaft) in clean tube or container, in paper envelope, or directly inoculated onto IMA media (Inhibitory Mold Agar).	Room temperature (15-30°C) within 72 hrs
	Mucocutaneous membranes	Collect swab of infected area (e.g., mouth, vagina, urethra) and transport in Modified Amies Clear media (available at lab).	Room temperature (15-30°C) within 72 hrs
	Nails	Clean nail with 70% alcohol. Scrape nail and discard. Scrape nail again from infected area and save in sterile container, paper envelope, or directly inoculated onto IMA media (Inhibitory Mold Agar).	Room temperature (15-30°C) within 72 hrs
	Respiratory	Collect 7-10 ml of aerosol, early morning sputum, tracheal aspirate, lung biopsy, or bronchoscopy specimen in sterile container.	Refrigerated (2-8°C) within 72 hrs
	Skin	Clean skin with 70% alcohol. Scrape lesion at the active margin but do not draw blood. Place scrapings in clean container or directly inoculate onto IMA media (Inhibitory Mold Agar).	Room temperature (15-30°C) within 72 hrs
	Swabs for <i>C. auris</i> surveillance	Collect swab of axilla and groin area with BD Eswab Collection and Transport System with Modified Amies Clear medium (available at lab).	Refrigerated (2-8°C) within 96hrs
	Tissue	Submit in sterile container with a small amount of sterile saline. Do not allow tissue to dry out.	Room temperature (15-30°C) within 72 hrs
Urine	Collect 25-30 ml of catheterized or early morning clean catch urine into a sterile container.	Refrigerated (2-8°C) within 72 hrs	

Parasitology Specimen Collection Guide

TEST	SPECIMEN	COLLECTION INSTRUCTIONS	TRANSPORT
Ova and parasite (O&P) exam	Preserved stool	Collect stool into clean dry container. Do not contaminate with urine or water. Transfer stool to fill lines of both the Formalin (pink top) and PVA (blue top) vials provided. Do not refrigerate.	Room temperature (15-30°C) within 72 hrs
<i>Entamoeba histolytica</i> <i>E. dispar</i> differentiation	Fresh stool	Collect stool into clean dry container with a screw-capped lid. Do not contaminate stool with urine or water. Transport to lab within 24 hours.	Refrigerated (2-8°C) If transport will be delayed, stool should be frozen.
Pinworm Exam	Pinworm paddle	Collect early in morning before bathing or bowel movement. Apply sticky side of paddle to the perianal area multiple times. Return paddle to tube and snap lid closed.	Room temperature (15-30°C) within 72 hrs
Helminth ID	Worm, tapeworm proglottid or scolex	Place worm into a clean container. Cover with saline or cold water.	Refrigerated (2-8°C) within 72 hrs
Malaria ID	Giemsa-stained Smears	Fingerstick blood is preferred over blood collected into EDTA. Smears must be prepared within 1 hour of collecting blood. Submit both thick and thin smears stained with Giemsa stain.	Room temperature (15-30°C) within 72 hrs

Serology Specimen Collection Guide

TEST	SPECIMEN	COLLECTION INSTRUCTIONS	TRANSPORT
HCV Quantitative RNA	Serum	<p><u>Fresh</u>: Aseptically collect 8-10 ml of whole blood in into a tiger top Serum Separator Tubes (SST). Do not freeze whole blood.</p> <p><u>Refrigerated/Frozen</u>: If transportation to the lab cannot be accomplished within 5 days, centrifuge the specimen at 800-1,600 x g for 20 minutes and refrigerate for up to 5 days. Transfer serum to a sterile polypropylene tube and freeze at -20°C for longer periods of time. Ship the serum on cool packs or frozen on dry ice</p>	Hold at 2-8°C prior to transportation to the laboratory. Transport to the laboratory within 5 days of collection.
Hepatitis, HIV, Syphilis, Toxoplasma, and Measles Serology	Serum	Aseptically collect 8-10 ml of whole blood in one of the following Serum Separator Tubes (SST); tiger top, gold top, or a red top may be used instead of the SST. If a delay of more than 48 hours is anticipated prior to delivery to the lab, centrifugation is recommended (allow blood to sit at least 30 minutes at 15-30°C before centrifugation or refrigeration). Plastic tubes only. Do not freeze whole blood.	General guide for multiple test requests. Hold at room temperature (15-30°C) up to 1 day. Hold at 2-8°C for up to 5 days. Transport to the laboratory at 2-8°C within 5 days of collection. See above for specific transport requirements for each test.
HIV 1 Viral Load Aptima	Plasma	<p><u>Fresh</u>: Aseptically collect 1 lavender top tube of whole blood with EDTA anticoagulant or one Plasma Preparation Tube (PPT). Mix well by gently inverting the tube 5-6 times. Plastic tubes only. Do not freeze whole blood.</p> <p><u>Refrigerated/Frozen</u>: If transportation to the lab cannot be accomplished within 24 hours, centrifuge the specimen at 800-1,600 x g for 20 minutes and refrigerate for up to 3 days. Transfer plasma to a sterile polypropylene tube and refrigerate for up to 5 days or freeze at -20°C for longer periods of time. Ship the plasma on cool packs or frozen on dry ice.</p>	Hold at 2-8°C prior to transportation to the laboratory. Transport to the laboratory within 24 hours of collection. Plasma may be frozen at -20°C and shipped to the lab on dry ice.
QuantiFERON-TB Gold	Whole Blood	<p>Collect 1 mL of blood by venipuncture directly into each of the four (4) unique QuantiFERON®-TB Gold Plus (QFT-Plus) blood collection tubes. Tubes must be at room temperature prior to collection. Under or overfilling of the tubes may lead to erroneous results.</p> <p>Shake the tubes ten times just firmly enough to ensure the entire surface of the tube is coated with blood, to solubilize antigens on the tube walls.</p> <p><u>OCPHL can only accept specimens collected Monday – Thursday.</u></p>	<p>Hold at room temperature (15-30°C) prior to transportation to the laboratory. Transport to the laboratory within 16 hours of collection.</p> <p>DO NOT REFRIGERATE</p> <p>IF tubes cannot be transported to the laboratory within 16 hours of collection: Incubate tubes at 37 +/- 1°C for 16-24 hours. After incubation, hold tubes at 4°C to 27°C and transport to the laboratory within 3 days.</p>

Virology Specimen Collection Guide

TEST	SPECIMEN	COLLECTION INSTRUCTIONS	TRANSPORT
Chlamydia/Gonorrhea and/or Trichomonas nucleic acid amplification	Endocervical (Genital) swab - Females	<p>Aptima Unisex Swab Specimen Collection Kit: Use the white shaft swab with red printing to remove excess mucus from the cervical os and surrounding mucosa and discard.</p> <p>Insert the specimen collection swab (blue shaft swab in the package with green printing) into the endocervical canal and gently rotate clockwise for 10 to 30 seconds to ensure adequate sampling. Withdraw the swab carefully by avoiding any contact with the vaginal mucosa.</p> <p>Remove the cap from the swab specimen transport tube and immediately place the specimen collection swab into the transport tube. Discard and replace the tube if the contents are spilled. Carefully break the swab shaft at the score line against the side of the tube and discard the top portion of swab shaft. Re-cap the swab specimen transport tube tightly.</p>	After collection, transport and store the swab in the swab specimen transport tube at 2°C to 30°C until tested. Specimens must be tested within 60 days of collection.
Chlamydia/Gonorrhea nucleic acid amplification	Rectal swab	<p>Aptima Multitest Collection Kit: Use the small-tipped specimen swab only (DO NOT USE THE LARGE-TIPPED SWAB FOR SPECIMEN COLLECTION). Do not touch the soft tip or lay the swab down. Hold the swab, placing your thumb and forefinger in the middle of the swab shaft covering the score line. Do not hold the swab shaft below the score line.</p> <p>Carefully insert the swab into the rectum about 1-2 inches past the anal margin and gently rotate the swab clockwise for 5-10 seconds. Withdraw the swab without touching the skin.</p> <p>Unscrew the tube cap while holding the swab. Place the small-tipped swab into the transport vial, making sure that there is fluid in the bottom of the vial. If contents of the tube are spilled, use a new collection kit. Break the swab at the score line and replace the screw cap securely. Discard the top portion of the swab shaft. Tightly screw the cap onto the tube.</p>	After collection, transport and store the swab in the swab specimen transport tube at 2°C to 30°C until tested. Specimens must be tested within 60 days of collection.
Chlamydia/Gonorrhea nucleic acid amplification	Throat swab	<p>Aptima Multitest Collection Kit: Peel open the swab package and remove the blue shaft small tipped swab (DO NOT USE THE LARGE-TIPPED SWAB FOR SPECIMEN COLLECTION). Do not touch the soft tip or lay the swab down. Hold the swab, placing your thumb and forefinger in the middle of the swab shaft covering the score line. Do not hold the swab shaft below the score line.</p> <p>Carefully insert the swab into the throat ensuring contact with bilateral tonsils (if present) and the posterior pharyngeal wall, then withdraw the swab without touching the inside of the cheeks or tongue.</p> <p>Unscrew the tube cap while holding the swab. Place the small-tipped swab into the transport vial, making sure that there is fluid in the bottom of the vial. If contents of the tube are spilled, use a new collection kit. Break the swab at the score line and replace the screw cap securely. Discard the top portion of the swab. Tightly screw the cap onto the tube.</p>	After collection, transport and store the swab in the swab specimen transport tube at 2°C to 30°C until tested. Specimens must be tested within 60 days of collection.

Virology Specimen Collection Guide

TEST	SPECIMEN	COLLECTION INSTRUCTIONS	TRANSPORT
Chlamydia/Gonorrhea and/or Trichomonas nucleic acid amplification	Urine	<p>Aptima Urine Specimen Collection Kit: Patient should not urinate at least one hour prior to collection of specimens.</p> <p>Collect the first 20-30 ml of voided urine (the first part of the stream) in a sterile, plastic, preservative-free, urine collection cup.</p> <p>Remove the cap and transfer 2 mL of urine into the urine specimen transport tube using the disposable pipette provided. The correct volume of urine has been added when the fluid level is between the black fill lines on the urine specimen transport tube label (SPECIMENS OUTSIDE THESE LINES WILL NOT BE ACCEPTED). Re-cap the urine specimen transport tube tightly.</p>	Urine specimens in Urine Collection Kit can be transported and stored at 2-30°C. Specimens must be tested within 30 days of collection.
Chlamydia/Gonorrhea and/or Trichomonas nucleic acid amplification	Vaginal swabs	<p>Aptima Multitest Swab Specimen Collection Kit: Remove the swab aseptically. Discard and use a new swab if contaminated. Do not touch the soft tip or lay the swab down. Hold the swab, placing your thumb and forefinger in the middle of the swab shaft covering the score line. Do not hold the swab shaft below the score line.</p> <p>Insert the swab into the vagina about 2 inches past the introitus and gently rotate the swab for 10-30 seconds. Make sure the swab touches the vaginal wall. Remove the swab without touching the skin.</p> <p>Unscrew the tube cap while holding the swab. Discard and replace with a new transport tube if the contents are spilled. Place the swab into the tube and break off the swab at the black score line against the side of the tube. Discard the top portion of the shaft. Screw the cap tightly and label the tube.</p>	After collection, transport and store the swab in the swab specimen transport tube at 2°C to 30°C until tested. Specimens must be tested within 60 days of collection.
Fusion Multiplex Assay and/or Influenza PCR	Nasal swabs	Use a dry synthetic fiber swab to swab each nostril. Do not touch the soft tip or lay the swab down. Carefully insert the swab in the first nostril 1/2-3/4 inches. Rotate with moderate pressure against as much of the wall of the anterior nares regions as possible in a large circular path inside the nose at least 4 times (~10-15 seconds). Using the same swab, repeat on the other nostril. Place swab in a sterile, screw-capped vial with 2-3 ml of viral transport medium.	Transport to the laboratory as soon as possible, no later than 72 hours (96 hours for Fusion Assay), at 2-8°C. Specimens that cannot be transported within 72 hours should be frozen at -70°C and transported on dry ice.
Fusion Multiplex Assay, Respiratory Pathogen Panel, Influenza PCR and/or Measles PCR	Nasopharyngeal (NP) swab	Use a dry synthetic fiber swab. Tilting the head back 70 degrees, gently and slowly insert swab through the nostril parallel to the palate until resistance is encountered. The nasopharynx is contacted when the distance inserted is equivalent to that from the nostril to the ear. Gently rub and roll swab, leaving it in place for several seconds to absorb secretions. Slowly remove swab while rotating it and place in a sterile, screw-capped vial with 2-3 ml of VTM (Viral Transport Medium) or UTM (Universal Transport Medium).	Transport to the laboratory as soon as possible, no later than 72 hours (96 hours for Fusion Assay), at 2-8°C. Specimens that cannot be transported within 72 hours should be frozen at -70°C and transported on dry ice.

Virology Specimen Collection Guide

TEST	SPECIMEN	COLLECTION INSTRUCTIONS	TRANSPORT
HSV & VZV nucleic acid amplification	Lesion	Collect specimens of vesicle fluids from the bases of lesions before crusting and healing have begun. Use a swab to obtain both fluid and cells from open lesions and break swab into a screw capped vial with 2-3 ml of viral transport medium.	Transport to the laboratory as soon as possible, no later than 72 hours, at 2-8°C. Specimens that cannot be transported within 72 hours should be frozen at -70°C and transported on dry ice.
Influenza PCR	Bronchial wash	Bronchial and bronchoalveolar washes are usually collected from hospitalized patients using specialized (invasive) procedures. Specimen should be transferred to a sterile leak proof container before transporting to the laboratory.	Transport to the laboratory as soon as possible, no later than 72 hours, at 2-8°C. Specimens that cannot be transported within 72 hours should be frozen at -70°C and transported on dry ice.
Influenza PCR	Nasal washings	While the patient's head is tilted back slightly, instill several milliliters of sterile saline into each nostril; bring the head forward and allow the saline to drain into a small sterile container held beneath the nose. A small catheter with suction may be used with infants. Pour the contents into a sterile, screw-capped vial.	Transport to the laboratory as soon as possible, no later than 72 hours, at 2-8°C. Specimens that cannot be transported within 72 hours should be frozen at -70°C and transported on dry ice.
Measles PCR Or Influenza PCR	Oropharyngeal/ Throat swabs	Using a synthetic fiber swab (cotton or calcium alginate swabs or swabs with wooden shafts are not acceptable), dry or moistened with viral transport medium, rub the tonsils and posterior pharynx and place in sterile, screw capped vial with 2-3 ml of VTM (Viral Transport Medium) or UTM (Universal Transport Medium).	Transport to the laboratory as soon as possible, no later than 72 hours, at 2-8°C. Specimens that cannot be transported within 72 hours should be frozen at -70°C and transported on dry ice.
Measles PCR	Urine	Clean, voided urine specimens collected in sterile conventional containers, while not the specimen of choice, are acceptable for some viruses. No special collection requirements are needed. Specimens should be kept refrigerated until transported to the laboratory.	Transport to the laboratory as soon as possible, within 7 days, at 2-8°C. Urine cannot be frozen.

Virology Specimen Collection Guide

TEST	SPECIMEN	COLLECTION INSTRUCTIONS	TRANSPORT
Mumps PCR	Buccal Swab	<p>To obtain a buccal specimen, massage the parotid gland area (the space between the cheek and teeth inside the mouth just below the ear) on each side of the face for about 30 seconds prior to collection of the buccal secretions.</p> <p>Using a Dacron or other polyester swab (cotton or calcium alginate swabs or swabs with wooden shafts are not acceptable), rub the inside of each cheek with the same swab for about 10 seconds. Sweep the swab between the upper and lower molar areas of each side of the mouth. Ensure the swab is moist with saliva when finished swabbing. Place the swab in a tube containing 2-3 ml of viral transport media (VTM) or universal transport media (UTM).</p>	<p>Transport to the laboratory as soon as possible, no later than 72 hours, at 2-8°C. Specimens that cannot be transported within 72 hours should be frozen at -70°C and transported on dry ice.</p>
Norovirus PCR	Stool	<p>Collect a 2-5 gram portion of stool (formed or liquid) and place in a sterile leakproof container. No transport medium is required.</p>	<p>Transport to the laboratory as soon as possible, no later than 72 hours, at 2-8°C.</p>

Orange County List of Reportable Diseases

[California Code of Regulations, Title 17, Section 2500](#), mandates that certain communicable and non-communicable diseases/conditions be reported to the local health department using specified methods and time frames. The List of Reportable Diseases, which summarizes disease reporting requirements, may be downloaded from this website and freely copied.

It is important that you report notifiable diseases/conditions to the county where the patient resides so that appropriate follow-up can occur. The Confidential Morbidity Report (CMR) form may be used to report notifiable diseases/conditions to Orange County Public Health.

For more information on reporting, please see the [List of Laboratory Reportable Diseases in California](#) and [List of Reportable Diseases in Orange County](#)

ORANGE COUNTY HEALTH CARE AGENCY

MISSION: To protect and improve the health of Orange County residents, in collaboration with our system partners, by providing essential laboratory services in support of public health through quality, timely, and accurate test results.
